

Project Phoenix Tokenomics Overview

Introduction

Project Phoenix is a decentralized ecosystem aimed at revolutionizing digital asset management and community engagement. This document outlines the tokenomics, including the total supply, allocation strategy, and the utility of the Phoenix Token (PHX).

Total Supply

The total supply of Phoenix Tokens (PHX) is 1,000,000,000 (one billion) tokens.

Allocation

- 75% (750,000,000) PHX tokens (distributed to the community).
- 15% (150,000,000) PHX tokens (reserved for the team, subject to Vesting).
- 10% (100,000,000) PHX tokens (allocated for ecosystem development).

Utility

- PHX tokens are used for (Welcome Bonus).
- PHX tokens are used for governance.
- PHX tokens are used for staking and earning rewards.
- PHX tokens are used for purchasing premium services.

Token Sink

- PHX tokens are used for purchasing premium services.
- PHX tokens are used for staking and earning rewards.
- PHX tokens are used for purchasing premium services.
- PHX tokens are used for purchasing premium services (NFTs and other Web3).

Partnerships and Integrations

Project Phoenix has established strategic partnerships with leading blockchain projects, including Solana, to enhance interoperability and expand its reach. The ecosystem also integrates with major decentralized exchanges (DEXs) for seamless trading (Swap 1:1).

Conclusion

- PHX tokens are used for (Utility).
- PHX tokens are used for governance.
- PHX tokens are used for purchasing premium services.
